(54) Title: ATMOSPHERIC ELECTRIC ACUPUNCTURE MONITOR

Diagram of the invention

WO 2004/012645 A1

(57) **Abstract:** Atmospheric electric acupuncture monitor, according to Fig. 5 consist of an ion generator (1) a feed back generator (4), connecting cables (2) and an insulative cover (3). The ion generator will deliver the ions to the object to be treated (human or animal) resting on the insulative cover. The connecting cable will keep the object to be treated at a fixed potential (usually zero with respect the ground). The feed back unit will monitor the exposure (number of ions per unit time) as well as the total dose (integrated charge) to the object. According to the invention it is possible to control the electric effect released by the ions plating out over the area exposed.
